DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,117,128 to Albrecht et al.

Albrecht et al. clearly teaches the construction of an electric motor comprising:

a case (86);

a rotor assembly (80), the rotor assembly residing inside the case, the rotor supported by the case for both rotary and linear motion;

means (exciter system, column , lines 11-28) for linearly translating said rotary assembly with respect to the case;

means (exciter system, column 6, lines 58-67) for rotating the rotary assembly with respect to the case; and

a method for operating an electric motor comprising:

energizing a translate coil, the energized coil interacting with a rotor assembly to linearly move the rotor assembly; and

energizing a rotation coil, said energized rotation coil interacting with the rotor assembly to rotate the rotor assembly.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,117,128 to Albrecht et al. in view of U.S. Patent No. 5,291,084 to Shiotsuki et al.

Albrecht et al. disclose the construction of an electric motor as described above.

However, it fails to disclose stator having unequally spaced poles to induce the motor to turn in a predetermined direction.

Shiotsuki et al. teach the construction of a stepping motor having at least one set of asymmetric stator pole teeth for the purpose of providing pole teeth which are shifted from the center between the pole teeth of the inner yoke in a specific direction.

It would have been obvious to one skilled in the art at the time the invention was made to use the pole teeth arrangement disclosed by Shiotsuki et al. on the electric motor disclosed by Albrecht et al. for the purpose of providing pole teeth which are shifted from the center between the pole teeth of the inner yoke in a specific direction.

Conclusion

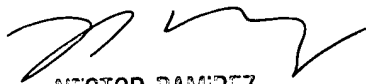

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
